FO4 FB Series

Outdoor Common Cathode Full Color Aluminum Screen

3.81 &4 &5.33 Specification

(320x320mm module)

Vision: Make the LED display more colorful, more intelligent, To be the leading brand in led screen industry.

Chapter 1 Product Introduction

Common Cathode with Energy-Saving

Common cathode is an energy-saving power supply technology for LED display, which can effectively solve the problems of high screen temperature and excessive power consumption of common anode circuit. the average temperature of the panel of the common cathode circuitis15 lower than that of the traditional common anode circuit, and the power consumption is reduced by more than 20%.

Four-level energy-saving technology

Level I dynamic energy saving: when the signal is not displayed, turn off the driving circuit of the constant current tube chip;

Level II black screen energy saving: when the display screen is completely black, the static consumption current of the chip drops from 6mA to 0.6mA;

Level III full-screen energy saving: when the low level is maintained for 300ms, the static consumption current of the chip drops from 6mA to 0.5mA;

Level IV shunt power supply and step-down energy saving: the current first passes through the lamp bead, and then goes to the negative electrode of the IC, so that the forward voltage drop becomes smaller and the on-resistance becomes smaller.

• Real color, more realistic picture

The refresh rate is up to 3840Hz, the contrast ratio is up to 12000:1, and the grayscale is 16 bit. The SMD 3IN1LED lamp beads composed of red, green and blue have good consistency and the viewing angle can reach more than 140°.

Structure optimization, flexible installation

It supports various installation methods such as floor-standing, hoisting, and wall-mounted, and front and rear maintenance to meet the needs of different customers. Hard connection(Module-Hub pin to pin direct connect), no structure installation, saving structure cost.

Driving Project

It has the function of list up and down hidden, high refreshing ratio, dark dot amended in first line, low grayscale amended, color cast and spot amended, etc.

Stable and high protection

Outdoor application products, IP66 protection level, die-cast aluminum cabinet, with corrosion resistance, high melting point, flame retardant, fireproof, moisture-proof and salt spray-resistant, high flatness, working temperature -40 -80 , can operate normally in the seaside environment for a long time, strong environmental adaptability, and can work outdoors all-weather.

Stable and reliable performance

Ultra-low temperature rise, low power consumption, low attenuation, and the good thermal conductivity of the aluminum module itself, make the heat dissipation effect of the whole screen better, no need to install air conditioners, high reliability and long service life.

Customizable cabinet size, flexible installation

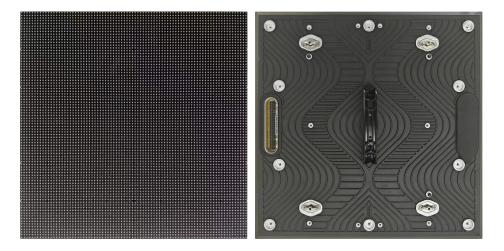

1280*960, 960*960, 960*640, 640*960, 640*640 and other cabinet sizes to meet the installation needs of different scenarios.

Chapter 5 Description for Product Features

5.1 New added vent valve

For the FC series of LED display, a vent valve has added in the bottom of power cabinet, it can adjust inner gas pressure, recoil temperature rise and balance inner environment.

5.2 Strong Adaptability for outdoor environmental condition

5.3 Structural Hard Link, Wireless Design.

The product structure is to adopt hard link, wireless design, its appearance is tidy and beautiful.

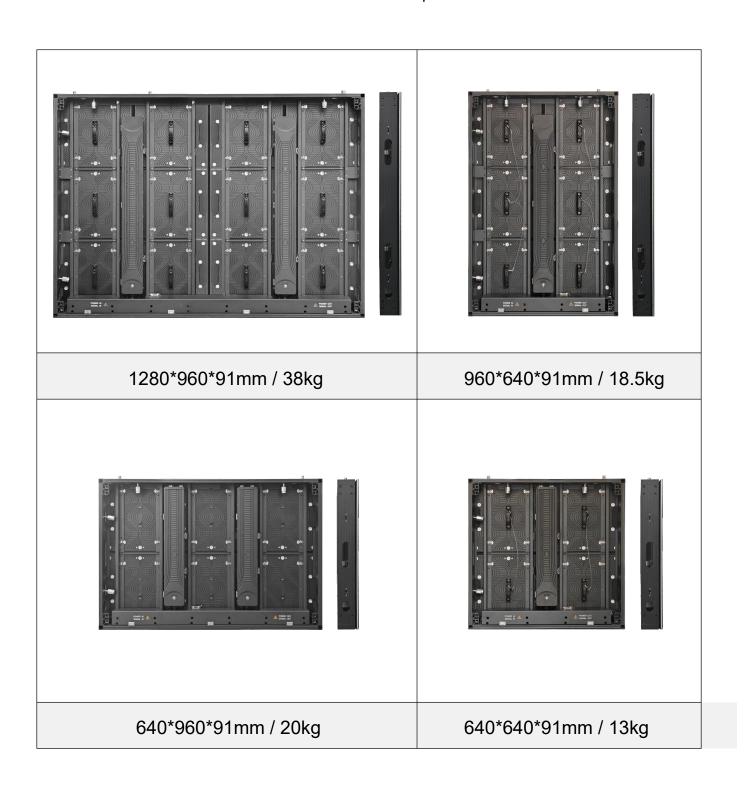

5.4 Aluminum Profile Cabinet, Lightweight, Safety and Reliability, No Distortion.

FC series of LED display is to adopt aluminum profile cabinet, the weight of single cabinet is just 24.5KG, display module is die-casting aluminum material, it is fire resistance, no distortion even it is under the high environmental temperature.

5.5 Customizable cabinet size.

Cabinets of various sizes can meet the installation requirements of different scenarios.

Chapter 6 User Manual

6.1 Notification

Table 6-1 Notification

Item	Notification
Temperature	Keep the work temperature within -10 $^{\circ}\mathrm{C}\!\sim\!50^{\circ}\mathrm{C}$
Humidity	Keep the storage temperature within -20 $^{\circ}\text{C}\!\sim\!60^{\circ}\text{C}$
Waterproof	Keep the work humidity within 10%RH \sim 98%RH
Dust-proof	Keep the storage humidity within 10%RH \sim 98%RH
Anti-Electromagnetic radiation	IP66
Electrostatic Prevention	IP66
Temperature	LED display shouldn't put under the environment where has strong interference by electromagnetic radiation, which would be easy to picture display abnormal.
Humidity	It should be ground connected well for power supply, cabinet, mental cover of display body, the resistance of ground connection<10 Ω , to avoid making any damage to electric components.

6.2 User Manual

Table 6-2 User Manual

Item	User Manual
Electrostatic Protection	The installer need wear electrostatic ring and electric gloves, each equipment should take ground connection well when installing.
Connection Type	There are positive and negative electrode silk printed on module, don't allow to reverse connect, and prohibit to connect with AC 220V.
Operate Type	Prohibit to assemble module, cabinet and whole of display under power on, operation should be under power off completely, to protect personal safety; Prohibit anyone to touch when the LED display is working, in case the static electricity which is generated by body to break through LED and other components.
Dismantle and Transportation	Don't allow to throw, push, compress module, to prevent module falling down, to avoid breaking kit, damage LED chips, etc.

Item	User Manual
Environmental Inspection	It should match temperature and humidity meter for LED display at installation site, to monitor its surrounding environment, so that it can find out if LED display being affected with damp, moisture, etc.
The Usage of LED display	1.The environmental humidity should be 10%RH~65%RH, it is suggested to turn on LED display one time each day, normal to use above 4 hours each time, to remove its damp.
	2. When the environmental humidity is above 65%RH, it should make dehumidification to environment, and it is suggested to work LED display above 8h each day.
	3.When LED display has not turned on for a long time, it should preheat LED display to remove moisture before use, to avoid damage LED because of damp, the specific method: 20% brightness to work for 2h, 40% brightness to work for 2h, 60% brightness to work for 2h, 80% brightness to work for 2h, 100% brightness to work for 2h, by this to gradually increase its brightness.

6.3 Acceptance Request and Method

Table 6-3 Acceptance Request and Method for LED display

Item	Acceptance Request and Method
Brightness of LED Display	Switch LED display to work as full brightness, use light-gun to measure the brightness of LED display within 10 minutes. When measuring its brightness, the light-gun need be vertical to LED display, to adjust the distance of light-gun and LED display, ensure the view window, black area, cover above 16 pixels, adjust focal length, to ensure LED chip being able to clearly view in eyepiece, then measure and record brightness data.
Visual Angle	The one should stand on the angle of 140°, bottom angle 65° to LED display when making measurement, it is requested that LED display should not have obvious the problem of dark block. LED display LED display ght Line Sight Line Sight Line

Chapter 7 Application Field

It is widely used for various of outdoor application fields, such as the exterior wall of building, Hanging Garden, Government Cultural Plaza, Bus Station, Vertical Advertising aside road, etc.

Zhengzhou University double-sided aluminum screen (220m²)

Square aluminum screen (130m²)

Jiangyin Gymnasium Aluminum Screen (280m²)

Aluminum screen on the south side of Sokcho coast, Gangwon-do, South Korea (150m²)
